I will now read a bit more about public option health insurance.

The public option would create a publicly administered health insurance option for every American. This public insurance would function the same as a private insurance plan, where you would pay a monthly premium to either buy into programs like Medicare or Medicaid or buy into a newly created health insurance agency, regardless of employment status. Americans would be given the choice between public insurance or private insurance like they have access to now, including current employment-based insurance. There would still be private health care providers and hospitals, but there would be a new option for consumers on the health insurance marketplace.

v2. Now that you've heard this information, do you support or oppose a publicly administered health plan, sometimes called a public option, that would operate alongside private health insurance plans and be available to all Americans?

You will now hear a statement from opponents of public option health insurance. After you hear this statement, I'll ask you a follow up question.

The public option will just be another costly government program that is bad for patients and families. The public option will be government controlled health care that could raise payroll taxes on working Americans by \$2,300 per year, and cause longer wait times, hospital closures, and patients won't be able to choose their own doctor.

Q54. Does this statement raise doubts for you about supporting the public option?
